

Applications are invited for a

2 YEARS' POST-DOCTORAL RESEARCH FELLOWSHIP

The Division 'Earth Rotation, Time and Space Geodesy' of the Royal Observatory of Belgium is looking to hire a post-doc to work with the GNSS data from the EUREF Permanent Network in order to study deformations within Europe. While this person does not need to have Bernese experience, we expect that the successful candidate will quickly learn Bernese based on previous experiences in GNSS data processing.

If the project is accepted, the position will be opened from January 1, 2007 for a 2-year period.

Please send before the end of January 2006 your CV to

Dr. Carine Bruyninx
